Week 8: Diffusion of innovations

Why do some new products spread quickly and others never take off?

Adopter categories
Innovators, early adopters, early majority, late majority, laggards.
The chasm sits between early adopters and the early majority.

Five attributes that speed adoption
Relative advantage, compatibility, complexity, trialability and observability.

Case: mobile payments in China
Network effects and QR codes lowered complexity and raised observability.
Discussion: what slowed adoption in other markets?
